RACCORD 3 PIECES. SERIE 3000

R3PS3...

RACCORD 3 PIECES R3P

Descriptif :

Le raccord 3 pièces est réalisé en Inox 316L [(DIN 17440 – WN 14404) Z2CND 17-12] ou 304L, avec des filetages d'implantation en NPT ou BSP. Ils peuvent être à souder BUTT ou à SOCKET .

Principe de fonctionnement :

Le serrage de l'écrou met en contact les deux autres parties du raccord. L'étanchéité est ainsi assurée par compression des 2 parties coniques du raccord.

Performances :

Ce raccord est de qualité moyenne et par conséquent son utilisation n'est permise qu'au cas où la tuyauterie du système en place est d'un niveau bas de gamme.

Pression maximum : 40 bars

Il existe une gamme supérieure dite 3000 livres et permet une résistance à la pression équivalente à 250 bars.

Qualité :

La qualité d'usinage de ces raccords et du type sanitaire est sans garantie particulière compte tenu du niveau de gamme de ce produit.

Toutefois nous veillons à assurer une fabrication de bonne qualité.

RACCORD UNION

à étanchéité conique
